PROFESSIONAL SUMMARY

Results-driven **.NET Developer** with expertise in building scalable enterprise web APIs, microservices, and high-availability financial systems. Proficient in C#, ASP.NET Core, EF Core, SQL Server, Clean Architecture, CQRS, and messaging queues. Strong background in production support for government-grade systems, enforcing compliance, secure authentication, and optimized data workflows.

TECHNICAL SKILLS

Languages & Core:	C#, .NET 8/9/10, ASP.NET Core Web API, ASP.NET Core MVC, LINQ
Architecture & Patterns:	Clean Architecture, Vertical Slice Architecture, CQRS (MediatR), DDD, Repository & Unit of Work, SOLID
Databases & Caching:	SQL Server, EF Core 10, Redis, Oracle, MySQL, Schema Optimization
Security & Auth:	JWT Authentication, Refresh Token Rotation, RBAC, Claims-Based Access Control, BCrypt
Integrations & Messaging:	Stripe API & Webhooks, RabbitMQ (Event-Driven), RESTful APIs
Quality & Testing:	xUnit, Moq, FluentAssertions, FluentValidation Pipeline Behaviors
Tools & DevOps:	Git, GitHub, Docker, Visual Studio, Postman, Serilog, JIRA

PROFESSIONAL EXPERIENCE

Technical Support Engineer | *E-Finance Company – Egypt* 2023 – Present

- Deliver tier-3 technical support for mission-critical government financial systems, maintaining high availability and strict service continuity.
- Troubleshoot complex database queries, API failures, and production incidents in real time alongside dev & infrastructure teams.
- Support secure access controls, system compliance, and performance diagnostics in enterprise-scale environments.

Software Engineering Intern (.NET) | *Huma Volve* June 2025 – August 2025

- Engineered scalable RESTful web APIs and integrated backend components using C# and ASP.NET Core.
- Designed and optimized relational database schemas in SQL Server, executing complex queries for optimal response times.
- Participated in daily Agile/Scrum standups, code reviews, and sprint planning following team coding standards.

KEY PROJECTS

Online Travel Booking API .NET 10, EF Core, CQRS, MediatR, Stripe, Redis, SQL Server

Enterprise backend API for a comprehensive multi-domain travel and tourism booking platform.

- Clean Architecture & CQRS:** Architected a Modular Monolith using Vertical Slice Architecture with MediatR, completely decoupling business logic from external dependencies.
- Multi-Domain Travel Engine:** Built booking engines for Tours (tiered pricing & capacity tracking), Hotels (real-time room availability & dynamic pricing), Flights, and Car Rentals.
- Payments & Security:** Integrated Stripe Payment Intents & async webhooks; built JWT authentication with Refresh Token Rotation and RBAC.
- Performance & Resilience:** Implemented FluentValidation MediatR pipeline behaviors, global exception middleware, and N+1-free EF Core projections.

Doctor Booking Platform .NET 10, Clean Architecture, CQRS, MediatR, JWT, xUnit, SQL Server

Production-ready medical appointment scheduling platform automating doctor availability and patient bookings.

- Architecture & Software Design:** Implemented 4-Layer Clean Architecture & CQRS for maintainable, testable feature boundaries.
- Slot & Booking Management:** Built dynamic doctor availability slot generation, appointment reservation workflows, and real-time patient-doctor messaging.
- Governance & Testing:** Developed central admin governance (system logs & announcements) and achieved high test coverage via xUnit, Moq, and FluentAssertions.

EDUCATION & TRAINING

Bachelor of Computer Science (BSc) <i>Higher Technological Institute (HTI)</i>	Class of 2022
GPA: 3.10 (Very Good) Graduation Project: Excellent (A+)	
Full Stack .NET Track <i>Information Technology Institute (ITI) – Tanta Branch</i>	Feb 2023 – Aug 2023
Intensive 6-month hands-on professional software engineering bootcamp.	
English Professional Communication <i>British Council</i>	Certified
